Write a short response

Choose an everyday movement not discussed in the lecture and explain one challenge it poses for motor control and how the nervous system might address it.

Up to 150 words. You may talk, collaborate, and use AI as much as you like.

Assess your own answer

Read your answer silently. Give your own 0–100 score for **each** rubric category.

English accuracy weight 2

Scientific accuracy weight 2

AI-relative originality weight 1

Style weight 1

Insightfulness weight 3

Class-relative originality weight 1

Use your judgment; then calculate an overall grade using the weights.

Assess someone else’s answer

Exchange answers with someone you trust or whose opinion you respect.

Read silently. Give your own 0–100 score in each category and an overall grade.

English accuracy weight 2

Scientific accuracy weight 2

AI-relative originality weight 1

Style weight 1

Insightfulness weight 3

Class-relative originality weight 1

Compare your category assessments and overall grades.

Where did your judgments differ most?

Volunteers: did you find a large discrepancy?

Discuss.
